

# CNC INDUSTRY

CONSULTING • TECHNOLOGY • SERVICE

# Everything under one roof

- **Consulting**
- **Integrated system solutions with connection to existing ordering and inventory management software**
- **Integration of existing hardware**
- **Network design**
- **B&S-Lab workshop software**
- **Trainings**
- **Interfaces to other manufacturers as well**

# 360° at your side

B&S CNC-Industry looks back on several years experience in the field of central and centralised workshop design.

We are available here to our customers not only as a machine supplier but also a partner in matters of consulting, software solutions and workshop fittings domestically and abroad.

# A phone call will suffice

B&S has a well developed system of services: from preventative maintenance to telephone support all the way up to remote support as needed.

Naturally we will train your employees on request in machine operation or maintenance.

And when the unexpected occurs – just call.  
We will find a solution.

# For all requirements

We offer your company the latest technologies with respect to equipping and designing your final edging area.

B&S has an extensive portfolio of machines and devices to equip a modern grinding or central workshop.

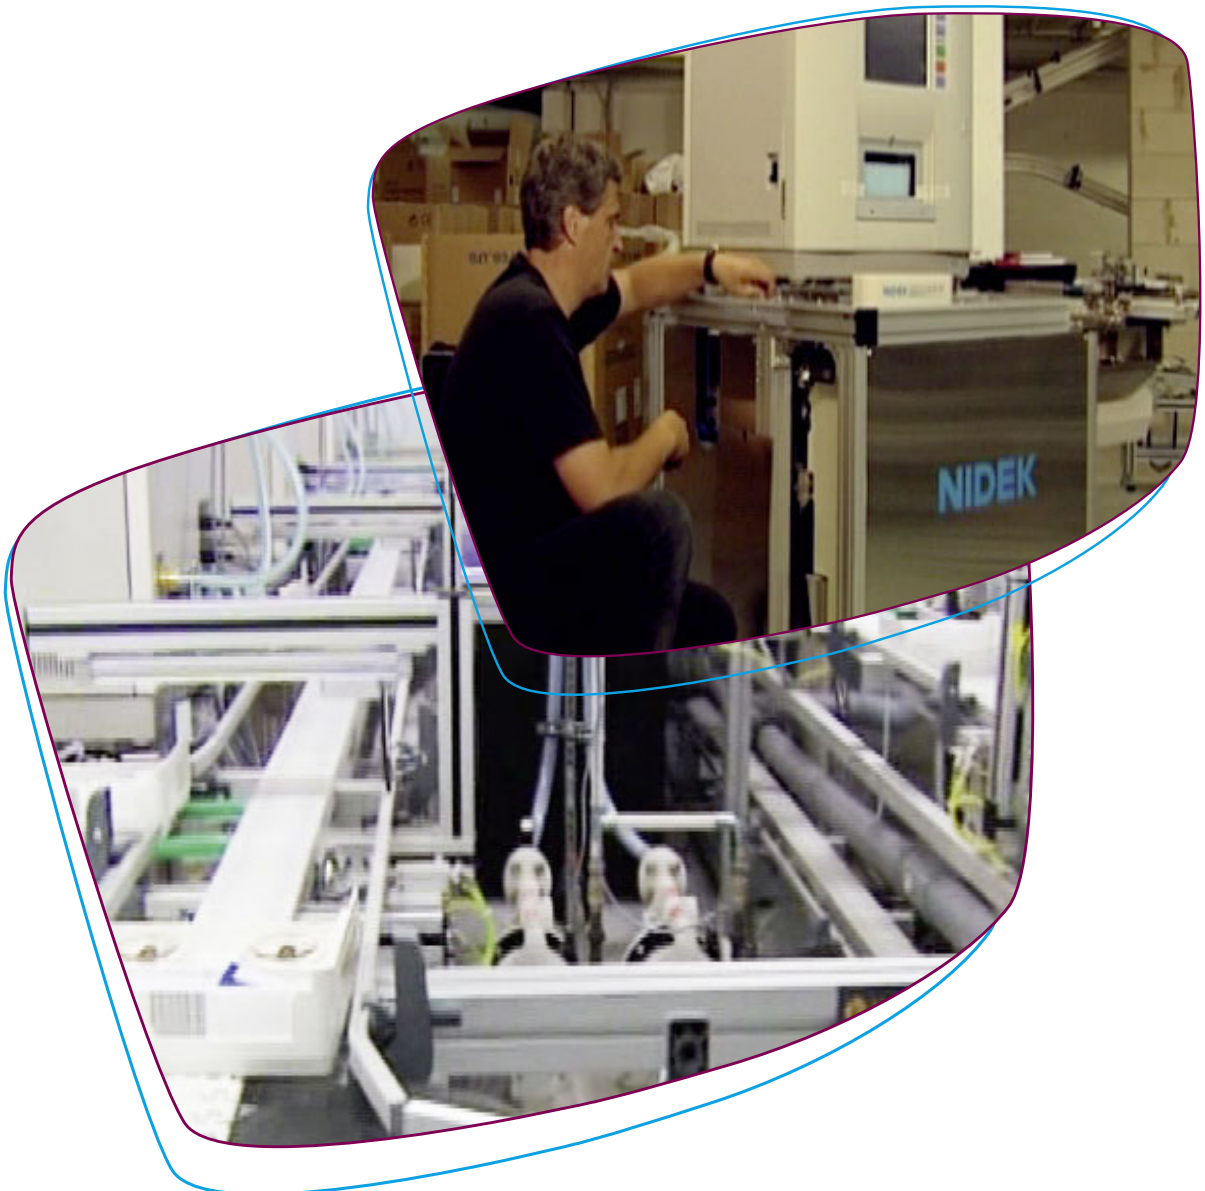

We offer state-of-the-art edging technologies (MCS-2010) combined with proven solutions all the way up to the industrial processing of silicate lenses.

# All-around support

Together we find an appropriate solution for your company. Afterwards you will have an assigned B&S project manager who will always be there for you.

From needs analysis, consulting, installation all the way to maintaining ongoing operations. Everything under one roof.

# Bespoke solutions

B&S offers a step-by-step, individual design of workshop solutions also for existing installations or machines.

To this end we use the latest technologies in the fields of dry-edging, industrial processing of silicate materials as well as an extensive offer of special production machines.

The aforementioned machines can be equipped with automatic loading systems and have network connections for the trouble-free connection to workshop software (OMA/VCA).

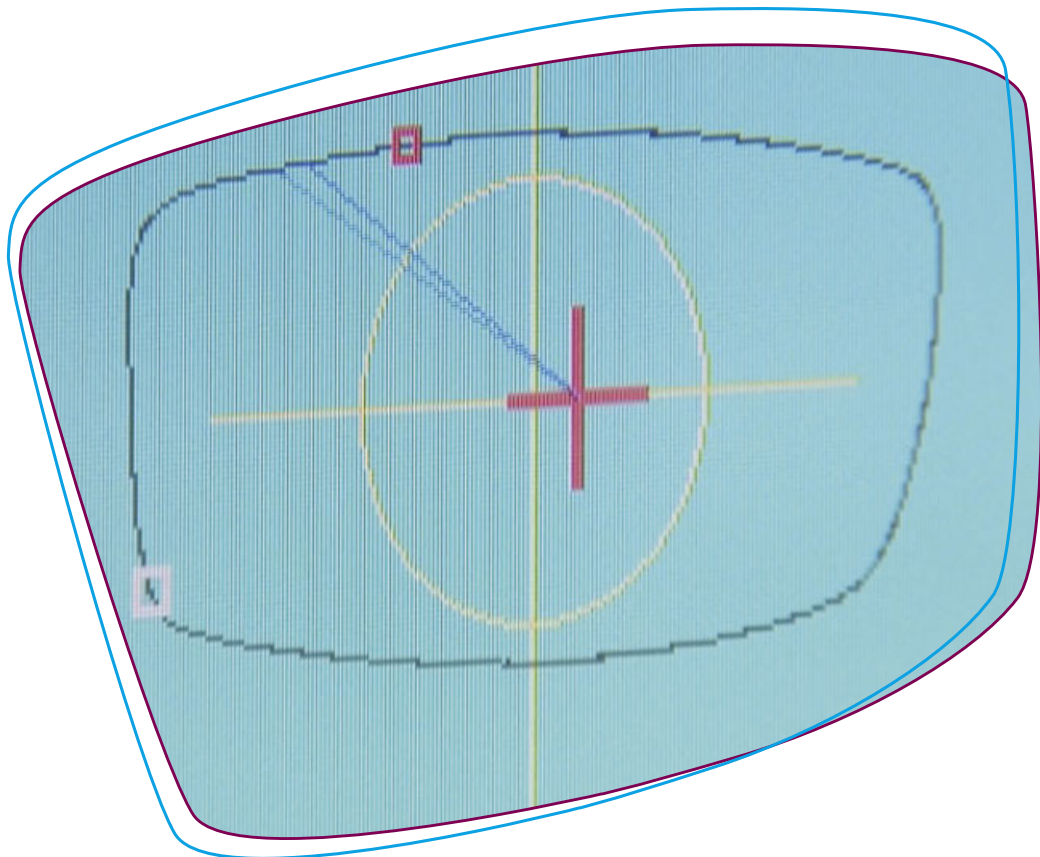

# Always a solution

B&S offers different solutions in the areas of workshop management and integration.

With our **B&S-Lab software** we can deliver a product to you that fully integrates into your existing IT environment or as needed can also act completely independently as a master system.

B&S-Lab is a workshop solution with great potential, from small and medium-sized grinding services to major industrial central workshops. All the work here can be personalised and dynamic.

In the field of remote edging B&S's **Open Optics** offers an ordering client as a front end for the in-house workshop software. This client can however also be personalised for your company with other existing software solutions.

## We place particular value on the details

B&S offers you a comprehensive range of accessories and small parts for lens processing. From block to adhesive pad, grinding stone to central suction – we have an extensive range of proven quality products ready for you.

# In a nutshell!

- Workshop items and parts for glasses
- Sports, reading, sun, cleaning merchandise and much more
- Lens processing systems
- Grinding, repair and consulting service
