TRIAL FRAME

NEW

Size: 38□12

Trial Frame Standard TABO Code: TFT MB

Trial Frame Standard International Code: TFI MB

The Miraflex trial frame is the right solution for solving children's refraction problems. It is light and comfortable. It fits the children's facial cranial measurements. Thanks to the adjustable elastic band, the frame remains well centered on the patient's face. This will allow to make a full vision test. The lens holding rings accept up to three standard 38 mm lenses. The Miraflex Trial Frame can be supplied either to the International or TABO standard.

MIRAooFLEX®

FLEXIBLE & SAFE

Flexible & Safe

The New Alternative for Children's Eye Wear

 Non-metal parts and hinge free construction reduce the risk of facial and eye trauma. Great for babies, toddlers and all sport activities.

 Miraflex frames have a nose bridge anatomically designed to distribute corrective lens and frame weights over a large surface, increasing user's comfort.

 Unique light, flexible and malleable materials make possible to optimize the adjustment of the frames to the face of the child to allow an early correction of refractive errors and strabismus treatments.

 A special adjustable and electronically welded elastic band keeps the frames snug and centred to allow an optimal optical correction and a perfect occlusion treatment.
